

What is

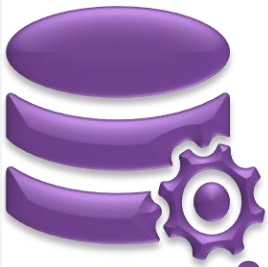

SAP

HANA

**HANA is a  
Database  
developed by  
SAP AG to be used  
With SAP ECC  
&  
S4HANA**

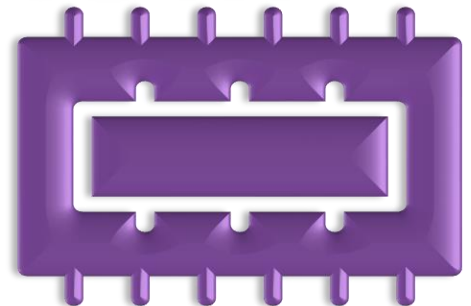

**HANA is not  
S4HANA!!!**

**HANA is a DB  
and S4HANA  
is an ERP.**

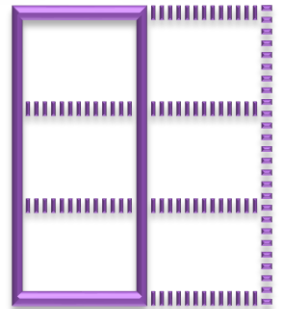

**Entire dataset  
resides in (RAM)  
and RAM's much  
bigger than ECC  
are Used Now.**

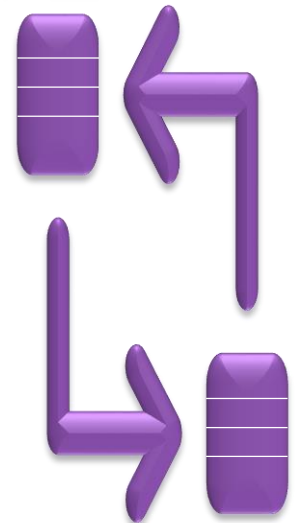

**Operations are  
executed in RAM  
to have Super fast  
access to data.**

**HANA is a  
Column  
Based Data Base  
Unlike earlier  
Row Based DB's.**

# HANA Replaces databases Sybase, Max, SQL, DB2 and Oracle

**HANA DB can  
run only on  
Linux Server  
(SUSE, RedHat  
etc)**

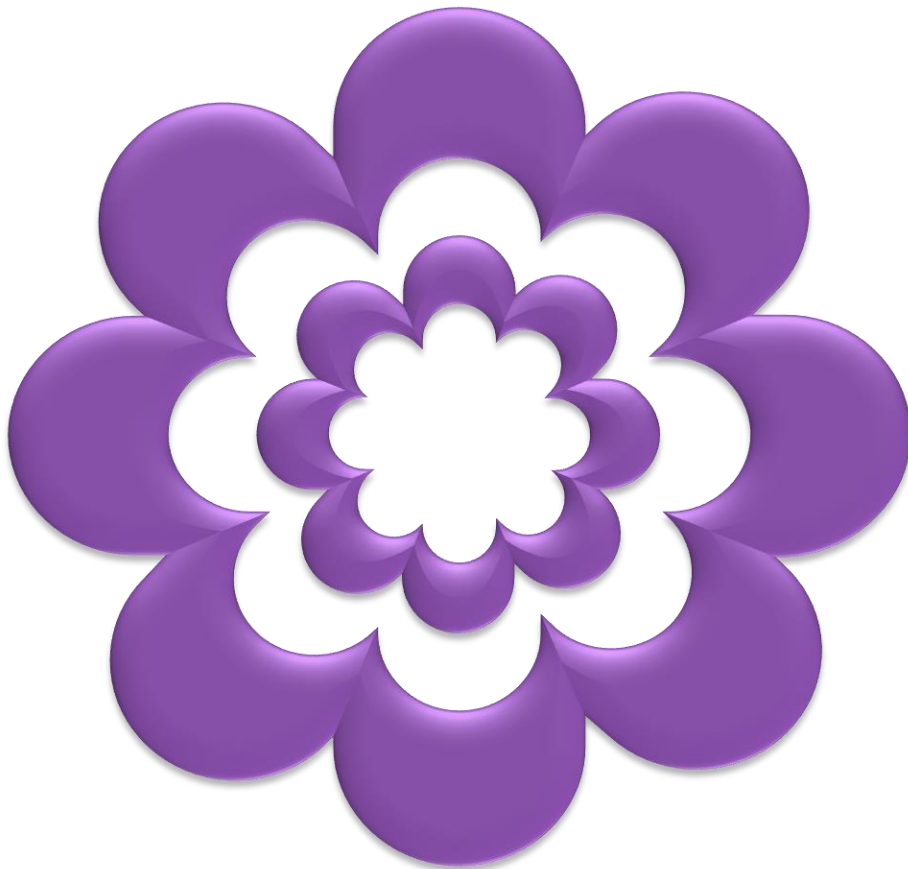

**Red Hat**

# High Performance Analytical Appliance

**Btw : - HANA also  
means a Flower in  
Japanese**
